## DETAILED ACTION

### ***Allowable Subject Matter***

Claims 11 and 21 are allowed.

The following is an examiner's statement of reasons for allowance: independent claims 1 and 12 recite subject matter "an illuminator connected to the second end of the housing, *the illuminator including a plurality of directed light source assemblies*" where the *illuminator* is disclosed as a *single element* in the specification and in claims 1 and 12. There is no suggestion for *an illuminator having a plurality of light source assemblies* connected to opposite end of the housing where the liquid columns are connected.

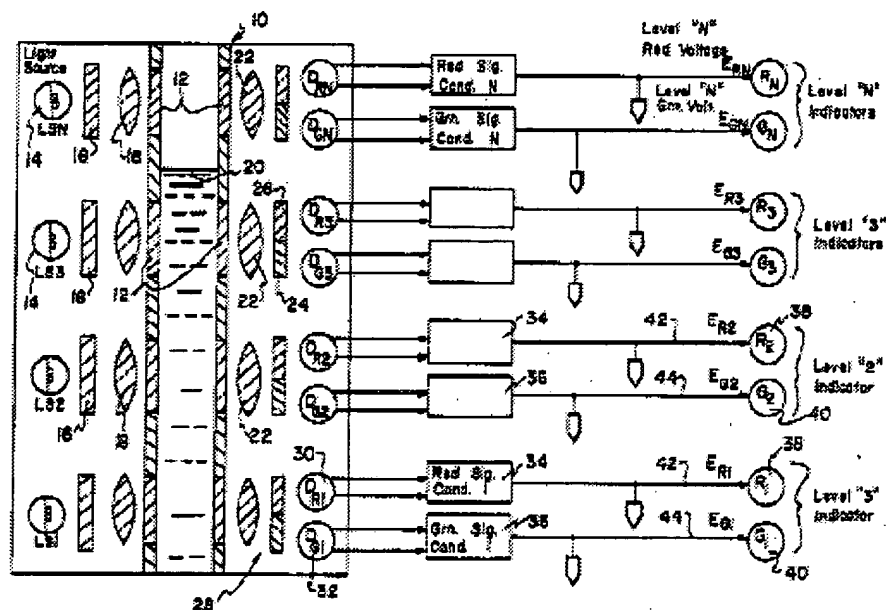

Independent claims 11 and 21 include subject matter "an angle between a line passing through a center of port assembly and liquid column body is approximately 10 degrees" connected to the second end of the housing, where half the light source emits a green light with "an angle approximately 7.1 degrees" and half the light source emits a red light with "an angle approximately 3.6 degrees". This limitation in combination with the remaining claim limitation is not taught or suggested in the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

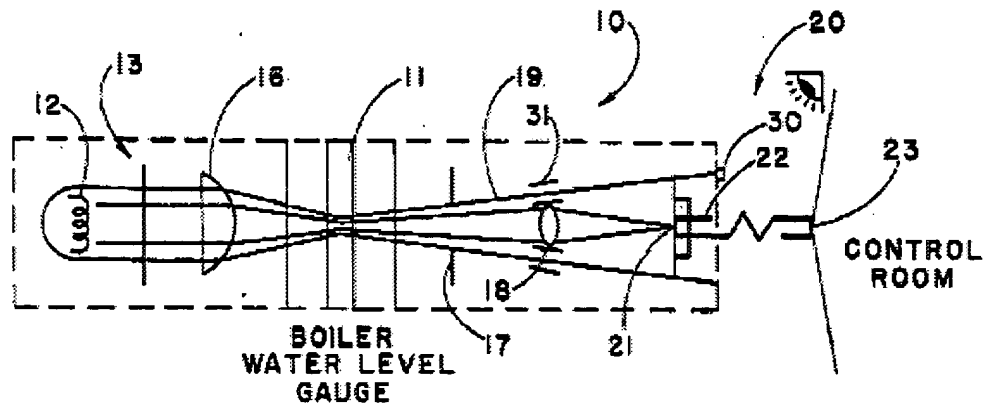

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

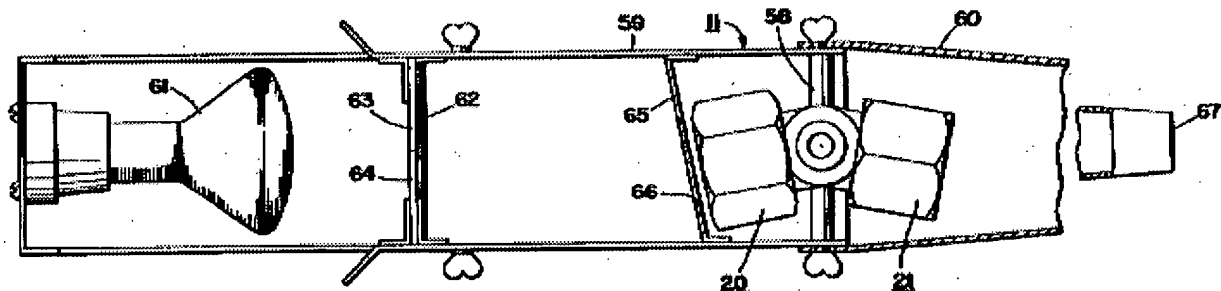

Keyes, IV et al (4450722) teaches a water level gauge comprises a water level column 10 with a plurality of light sources 14 able to emit red and green light and a plurality of detector assemblies 28. Keys, IV et al does not teach or suggest a port assembly or a plurality of port assemblies.

Hipple et al (4633711) teaches indicator assembly 10 and fiber optic light conducting system 20 including a tungsten-halogen lamp 12, bi-color filter assembly 13 and viewing port 11.

Goellner (3187573) teaches liquid level gauge comprising a bulb 61 in each water column 12. There is no suggestion for an illuminator having a plurality of light source assemblies connected to opposite end the housing where the liquid columns are connected.
